

Reduce Your Carbon Footprint with Bluemyth!

ENVIRONMENTAL THREATS

Since 1948, when nation-wide records became available, Canada's annual average temperature over land has warmed by a best estimate of 1.7°C.

Last-Mile Effect on Climate Change

Each year, the average Canadian consumer adds 16.5 tons of carbon dioxide to the atmosphere.

Canada committed to a 40%-45% reduction in its emissions from all sources from 2005 levels by 2030 and achieve net-zero missions by 2050.

BueBox enables multiple delivery at a single location, reducing emissions up to 16 tonnes annually and 52kg per day.
